ROADIE X-STREAM

Ever wonder why the last one standing at the end of the tour is the roadie?

The Roadie X-Stream is the most versatile professional atmospheric effects generator available today. By incorporating Jem's X-Stream Airflow System, the Roadie X-Stream blends fog and air to produce a variety of effects; from an optically translucent haze to an immensely dense "white-out" of fog.

The Roadie X-Stream has been designed to deal with the intense rigors of touring with a rigid chassis, protected on all eight corners by 20mm aluminum plates, and 40mm lifting bars. The outer casing and control panel also offer a degree of protection in poor weather conditions, making the Roadie X-Stream ideal for large outdoor stadium events. Overheat protection is also guaranteed through a unique, Direct Thermal Protection device.

The fog particulate is constant but can be diluted by increasing the airflow; transforming a dense fog into a light translucent haze, giving the right enhancement to high tech lighting. The Roadie is equipped with two large 2.5kW Hi-Mass Vaporizing Chambers, each with a twin, wide-bore, steel helicoil.

The Roadie X-Stream is fed by a massive 19-liter (5 US gallons) capacity and may be operated from a dedicated on-board, weather resistant control panel, an external DMX 512 source or via an optional PLC Interface.

Basic control is also possible via the Roadie X-Stream's remote (optional), allowing the machine to be fired at preset levels. A bank of four "shortcut" presets is featured for those wishing to get the Roadie X-Stream into action quickly.
